Cooking Without Power

From Prayer 2 Provision

Keep this card with your tea lights and cans so the steps are right there when the power goes out.

Tea light muffin tin stove

You need: a metal muffin tin, 12 tea lights, a long lighter, a wire rack or 2 cans, a cast iron skillet or small pot

1. Set the metal tin on your stovetop or a baking sheet. Never silicone.
2. Put a tea light in each cup and light them.
3. Raise your pan about 1 inch above the flames on a rack or two cans.
4. Set the skillet on top and cover with a lid.

Good for: soup, oatmeal water, pancakes, keeping food warm. About 4 hours per 12 tea lights. If flames grow tall, slide the pan off and cover the tin with a baking sheet.

Alcohol can heater (paint can or coffee can)

You need: a new quart paint can or a metal coffee can, a roll of toilet paper, 91% isopropyl alcohol, a metal lid or baking sheet, bricks or a grate

1. Remove the cardboard tube and squeeze the roll into the can.
2. Soak the paper with alcohol, but do not let it pool.
3. Set it on bricks or concrete, with a grate about 1 inch above for your pot. Optional: nestle it in a pot of sand.
4. Light it with a long lighter. The flame is almost invisible.
5. **To put it out,** cover it with the metal lid or baking sheet. Never blow it out.
6. **To refuel,** wait until it is out and cool. Never pour alcohol into a lit or warm can.

Test and time yours at home before you rely on it.

Blanket cooking (saves fuel)

You need: a pot with a tight lid and thick towels, blankets, or a cooler

1. Bring rice, beans, or soup to a boil.
2. Cover tightly and wrap the pot in towels or blankets, or set it in a cooler packed with towels.
3. Let the trapped heat finish cooking it over the next few hours.

Safety first

Cook on a heat safe surface, away from curtains and paper. Crack a window. Keep a metal lid or baking sheet nearby to smother flames, and never pour water on a wax or alcohol fire. Never leave a flame alone with children.

Never use a charcoal grill, propane grill, or gas generator inside your home or garage, even with the door open. Carbon monoxide has no smell and kills.

"She riseth also while it is yet night, and giveth meat to her household."
