Light and Power Plan

From Prayer 2 Provision

Check off what you have, fill in your medical device plan, and download your apps before you need them.

MY LIGHT AND POWER CHECKLIST

- [ ] LED flashlight or headlamp for each person
- [ ] Extra batteries
- [ ] Oil lamp, lamp oil, extra wick and chimney
- [ ] Tea lights and a lighter
- [ ] Battery lantern for kids' rooms
- [ ] Solar garden lights for halls and bathrooms
- [ ] Folding solar charger with USB
- [ ] Power banks, charged every month

MEDICAL DEVICES (CPAP, OXYGEN, NEBULIZER)

DEVICE	WHO USES IT	WATTS OR HOURS NEEDED	BACKUP POWER

Called my electric company about their medical program on: _____

My doctor's backup plan if the device cannot run: _____

Make your CPAP run longer on battery

- **Turn off the humidifier and heated hose.** Setting humidity to off can cut power use about in half, so a 250 to 300 watt hour battery lasts the night. Practice a night this way now.
- **Use your CPAP maker's DC power cord** to plug straight into a 12 volt battery or power station. Skipping the AC outlet saves power.
- **Power station:** at least 250 watt hours, with a pure sine wave outlet. Recharge it with a 100 watt solar panel during the day.
- **Car inverter:** only with the car outside, never in a garage.

APPS TO DOWNLOAD NOW, WHILE YOU HAVE WIFI

- [ ] Google Maps offline areas: home, work, school, family
- [ ] Army survival guide app, opened once
- [ ] American Red Cross First Aid app
- [ ] Bible app with a translation saved offline
- [ ] PDFs of documents and this course saved to my phone

OIL LAMP SAFETY

Lamp oil only. Keep the flame low, fill it only when cool, keep it away from curtains, kids, and pets, and never sleep with it lit.

"Thy word is a lamp unto my feet, and a light unto my path."

— PSALM 119:105 (KJV)
